Subject: Third River - Additional SSP 2 Locations
20131009 SSP2 Third River Probingwith proposed locations to EPA .pdf

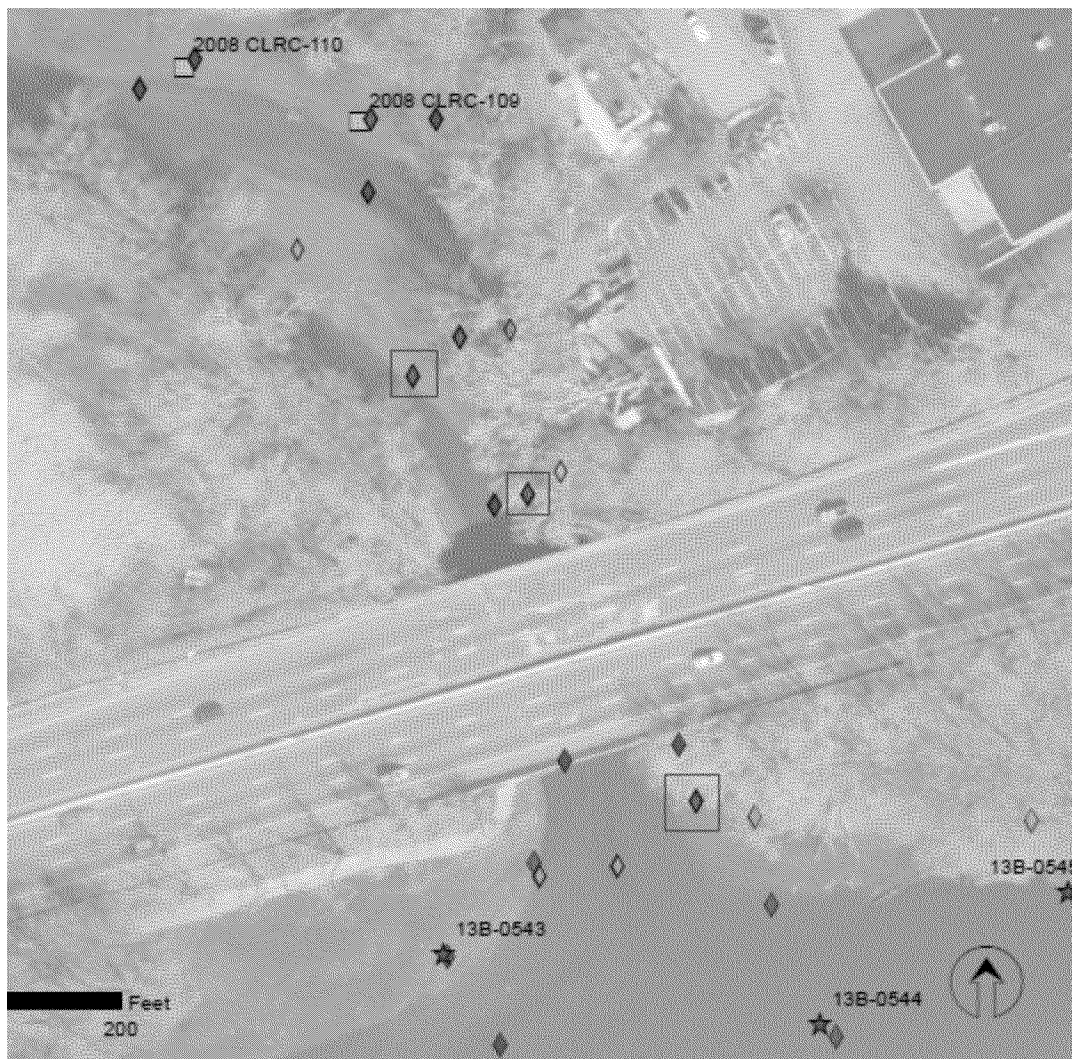

Sharon:

Attached is the probing map with 3 proposed additional locations. They fill in the spatial gap longitudinally between LRC cores 109 and 110 and the three SSP 2 locations (543, 544, & 545) at the mouth of the river already part of SSP 2. Probing data indicate that 3 to 6 ft of sediment was present at each of these locations. Please let us know if these are acceptable to CDM; if so the CPG will incorporate them into the program with Field Modification.

Please contact me with any questions or comments.

Thank you.
